- ✓ Subversion: GIT, Stash, Amazon CodeCommit
- ✓ Design: Adobe Suite (Photoshop/Illustrator), Confluence

Award Winning Projects

vStart Innovation Platform - App Challenge   October 2015

Brought together and managed a development team of new hires. Designed and deployed a platform that was picked up by multiple business units for further development.

Languages: Node.JS, Angular.JS, JADE, Express, Bootstrap and MongoDB

VCOP Timeline - Verizon Ovation Award   April 2014

Oversaw the implementation of a front-end timeline for records within Verizon's change management platform, VCOP. Contributions led to a February release, saving the project from its 'Jeopardy' status in January. Coordinated and released the first major upgrades to the platform since 2008.

Languages: ASP.NET, Bootstrap, CSS, JQuery and C#

Education

University of Southern California   May 2012

B.S. Computer Engineering

Experience

Verizon IT - Member Technical Staff III   July 2012 - Present

Client Account Management – CFO IT | Tampa, FL (Present)

→   Align business timelines with IT development and drive implementation processes.

→   Coordinating massive testing effort for Single-Biller Release.

PMO Organization - FiOS New Products | Tampa, FL

→   Managed JIRA Platform for FiOS New Products Organization.

→   Worked launch of FiOS IPTV, a nationwide update to our video platform.

C# Developer - Change Management | Alpharetta, GA

→   Led development launch of a Verizon Ovation Award winning front-end improvement to Verizon's change management tool, VCOP.

→   Deployed internal websites including the Change Management Portal and Home Page.

Infrastructure Support - Verizon Wireless | Irvine, CA

→   Created a PHP Storage Automation Tool, which saved 27 terabytes of data, valued at $135,000 in cost savings, through interfacing with numerous internal systems.

→   Assisted with the upgrading, commissioning and decommissioning of servers.

Technical Intern - Cisco   Summer 2011

Engineering/Marketing CO OP - Cypress   Summer 2010

More Proud Projects

PHP Storage Automation Tool   January 2013

Created a system that interfaces with numerous legacy applications to automate the manual work of closing out non-assigned storage requests.
Languages: PHP, SQL, Bootstrap, JavaScript and JQuery

Trouble Ticket Tracking   November 2015

Built a web application to allow comparison of the 30K records within Verizon's Trouble Ticketing system, CMIS. Automated report reading and comparisons.
Languages: Node.JS, Angular.JS, C#, ASP.NET, WCF Services, SQL and Bootstrap

Email Automation Systems   2013 - Present

Supporting systems which use Excel and templates to generate emails for various organizations to automate their communication.
Languages: Outlook, Excel, C#, ASP.NET, JS, HTML, CSS and Bootstrap

Personal Website   October 2015 - Present

Maintaining a personal website built using modern front-end technologies.
Languages: Express, Bootstrap, Angular.JS, Adobe Photoshop and Adobe Illustrator
